A. ABOUT THE COURSE

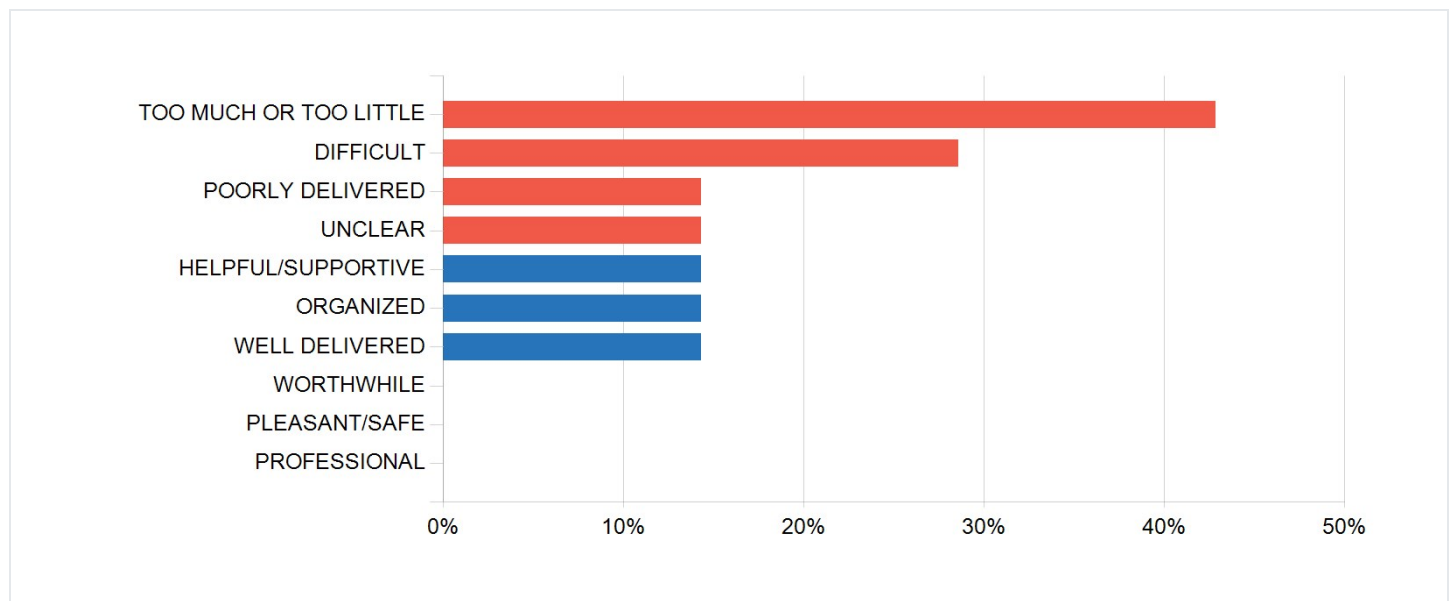

Please comment on the strong points of this course:

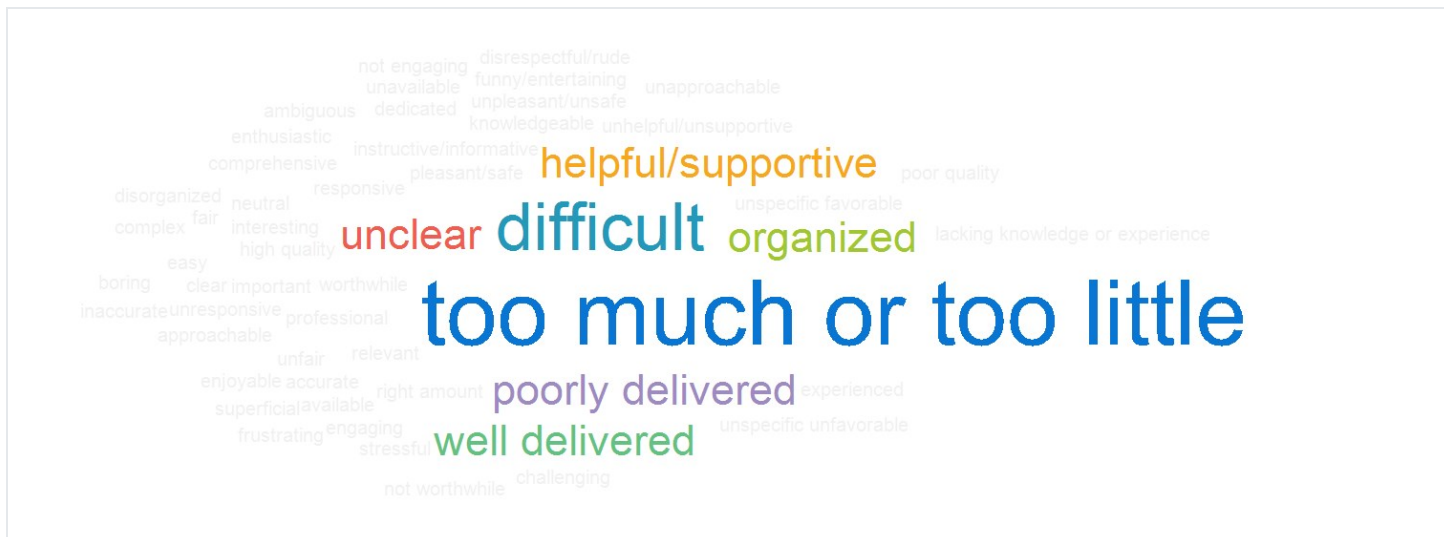

Comments
The instructor is very kind and caring as well as knowledgeable in her subject. There are slides that explain everything as well as the instructor provides annotations on those slides.
Very young professor, which is usually bad, but she was perfect. She knew exactly how to do things and knew the best ways to teach us, to be on the same wave with us and the whole she made very convinient to all of us.
curriculum was extensive and informative, grading was very fair
The course is very good at teaching basic econometrics topics and stata.
hard class but prof was really great. I love the use of guided in class assignments to go with the lecture topics.
Furthered by understanding of how to use stata in a more practical manner.
I really liked how the professor presented material for each chapter, along with gave lots of time to discuss with her any material we struggled on
This course is structured well even though the summer semester is short.
Our teacher is very informative and nice. She has been fair and helpful so I'd say both her and the TA have been the strong points.
The professor is very nice and she tries to help students in many ways to master the content of the material.

Comments
More problem sets. Five, instead of two, and each cost can be 5–10%, in order to be able to get a better grade at this course. Otherwise, it is very hard to pass this class.
too much material covered in too little time
The final project guidelines were unclear until 10 days before it was due. I think it would be better if it was broken down a little bit.
Lectures were long and little class participation was encouraged.
The research project is too long for the summer semester but the course is structured well. Professor Hong makes the most of the short semester and is able to get through a lot of course material in an efficient way.
Its a lot of material in a short amount of time makes it hard to absorb the material. I think the project and final should not be due so close together.
Shorten the chapters... It's too many.

B. ABOUT THE INSTRUCTOR

Please comment on the strong points of this instructor's teaching and presentation:

Comments
Instructor is enthusiastic and tries to explain everything well.
Nice and kind, everything was very precisely explained and I was never confused with her presentations, how I was confused with Professor Dey.
very clear on points and good at clarifying questions
Stella was fantastic. Very enthusiastic and warm. She was fair in grading and is fantastic at explaining concepts clearly.
Already mentioned
Clearly very knowledgeable about course content and how to effectively answer questions.
Professor Hong is great! You can tell that she knows the subject material very well and is very focused on making sure we feel good about it. She is always very open to help and offers help all the time. She is super sweet and makes sure you don't feel overwhelmed even though the class moves fast. Besides that, she really is a good teacher and does a lot of review.

Nothing; please don't lose your enthusiasm and kindness while teaching your subject! It made me care about coming to class.
She is perfect.
too fast
Consistent use of symbols and terms. I feel like a lot were used interchangeably which led to some confusion. Also very small thing, the prof uses X to when something doesn't meet a condition. This can be confusing in an econ class that constantly uses X as a variable.
More enthusiasm during lecture to try and keep students engaged.
The grading is a little bit harsh but understandable and is mostly fair.
